

Quarterly National Accounts and Annual Preliminary Accounts (Base 2000)

4th Quarter 2007 and Year 2007

GROSS DOMESTIC PRODUCT UP BY 1.9% IN THE YEAR 2007 AND 2.0% IN THE 4TH QUARTER 2007

GDP grew 1.9% in volume in 2007, 0.6 percentage points (p.p.) more than in the previous year. This behaviour was mainly influenced by domestic demand, benefiting from the recovery of Investment. The acceleration of domestic demand more than compensated the reduction of the contribution of net external demand to GDP growth. In nominal terms, GDP reached 162.9 billion euros, more 4.9% than in the previous year.

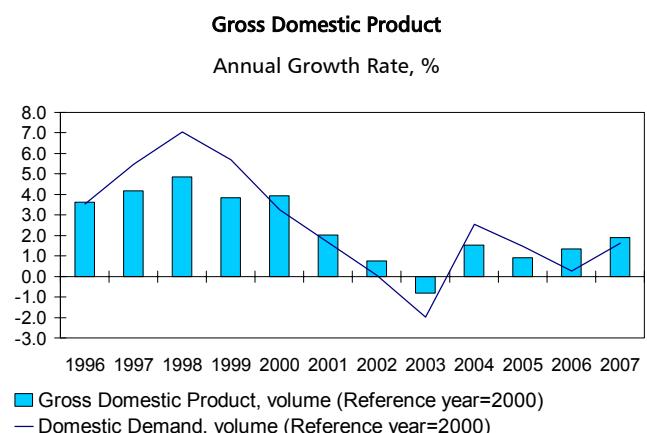

In the 4th quarter 2007, Gross Domestic Product increased by 2.0% in real terms compared to the same period of the previous year, accelerating from the precedent quarter (1.7%). This acceleration was associated to the growth of domestic demand, whose contribute to GDP growth rate was 3.4 p.p. in the 4th quarter (2.3 p.p. in the previous quarter), mainly determined by Investment. On the contrary, the contribution of net external demand to GDP growth decreased to -1.4 p.p. in the 4th quarter 2007 (-0.6 p.p. in the previous). Compared to the 3rd quarter 2007, the rate of change on Portuguese GDP was 0.7% in volume in the 4th quarter.

GDP up by 1.9% in 2007

Portuguese GDP grew, in real terms, 1.9% in 2007, accelerating from the previous year (1.3%). This result was supported by a stronger domestic demand, which grew 1.6% in 2007 (0.3% in 2006), while the contribution of net external demand to GDP growth diminished from 1.1 p.p. in 2006 to 0.1 p.p. in 2007.

The reduction of the contribution from net external demand resulted both from the deceleration of Exports of Good and Services and the acceleration of Imports of Goods and Services. Exports grew 7.1% in volume in 2007 (9.2% in the previous year) and Imports grew 5.4% (4.6% in 2006). Net borrowing of total economy stood at -8.6% of GDP in 2007, equal to value recorded in the previous year.

In nominal terms, GDP reached 162,919.3 million euros in 2007, growing 4.9% relatively to the previous year.

Decomposition of GDP Growth (volume)

Growth Rate, %

	Annual Growth Rate				
	2003	2004	2005	2006	2007

Flash - Flash Estimate (45 days); QNA - Quarterly National Accounts (70 days)

GDP up by 2.0% in the 4th quarter 2007

Portuguese GDP grew, in real terms, 2.0% year on year in the forth quarter 2007, accelerating from the previous period (1.7%). This acceleration was determined by domestic demand (particularly Investment), which grew 3.1% year on year (2.1% in the previous quarter). On the contrary, the contribution of net external demand to GDP year on year quarterly growth rate diminished from -0.6 p.p. in the 3rd quarter to -1.4 p.p. in the last quarter 2007.

Comparing with the flash estimate for the 4th quarter 2007 previously released, both the year on year and quarter on quarter growth rates on Portuguese GDP remained unchanged.

Gross Domestic Product

Year on Year Growth Rate, %

Methodological notes:

Quarterly National Accounts and Preliminary Annual Accounts published herein incorporate the Annual National Accounts (Base 2000) for the year 2005 published in January. Therefore, the estimates for the year 2006, as well as the quarterly values for GDP and its components are now recalculated.

In addition, Quarterly National Accounts incorporate new information, leading to revisions in some aggregates, namely:

- The latest version for the short-term indices (retail trade sales, industry turnover, industrial production, prices in industrial production and services turnover);
- The latest version for the Balance of Payments (January-December 2007) and the Monetary and Financial Statistics from Banco de Portugal;
- Information from Quarterly Business Survey, namely on the GVA estimates for some branches of activity and also on changes in inventories;
- The revision of external trade deflators (goods) for the 3rd quarter 2007, due to the integration of complete information for the 3 months of the quarter (note that in the first run of Quarterly National Accounts for that quarter, those deflators only included information for the first two months of the quarter).

In this Quarterly National Accounts first (regular) estimate for the 4th quarter 2007, the data used for external trade of goods was the January to December 2007 version. The deflators for external trade of goods were calculated using data for October and November.

GDP quarterly aggregates for demand and production approaches are estimated using seasonally adjusted quarterly indicators. The seasonal adjustment procedure used is indirect, i.e. seasonally adjusted GDP is the sum of its seasonally adjusted components. This procedure is based in probabilistic models estimated with the software X-12 Arima. Consequently, the estimated values are subject to changes as new observations become available.

Capital Transfers Received from the Rest of the World is an exception to the usual seasonal adjustment procedure. Given its high volatility, this series is not seasonally adjusted.

These estimates are calculated using information available until 6th March 2008.
