Input-Output Tables – Base 2011

2013

---

**An additional euro of private consumption expenditure originated more 74 cents of GDP and more 26 cents of imports in 2013**

In this press release, the Symmetric Input-Output Matrixes for the Portuguese economy are presented for 2013 and are fully consistent with the new National Accounts series and with the European System of Accounts SEC 2010.

As an illustration of the type of information provided, it worth mentioning that, under certain conditions, a uniform increase in Household Final Consumption Expenditure, totaling 100 monetary units, leads to a GDP increase of 74 units and a growth of imports of 26 units.
